

Yu Zhang (张宇)

GENERAL INFORMATION

Date of birth: April 26, 1990
Address: Beijing Ideal International Plaza, No.58 Northwest 4th Ring Road, Beijing 10080, China
Phone: +8615801382736
Email: zhangyulb@gmail.com
Academic page: <https://zhangyulb.github.io>

SHORT BIO

Currently I am a Vice Research Director with SenseTime Research, where I work on computer vision and machine learning.

At SenseTime I lead research projects and deliver products for [SensePhoto](#). I've developed TetrasSR, a market-leading snapshot photography technology shipped to various flagship phones of OEMs in mainland China. I did my Ph.D. at Beihang University, under the joint supervision from [Prof. Qingping Zhao](#) and [Prof. Jia Li](#). I did post-doc with Tsinghua university from 2019 to 2021, supervised by [Prof. Yebin Liu](#). I also hold an affiliate appointment with the [CVTEAM, Beihang University](#).

My interest lies in computer vision, event-based vision, machine learning, and optimization. Much of my research is about image and video processing with learning and optimization methods.

EDUCATION

Tsinghua University, Beijing, China

Postdoctoral researcher, March 2019 - March 2021 (supervisor: Prof. Yebin Liu)

Beihang University, Beijing, China

Ph.D., Computer Science (Outstanding Dissertation of the Year), Fall 2012 - June 2018

B.Eng., Computer Science and Engineering (Rank 3/200), Fall 2008 - July 2012

WORKING EXPERIENCE

SenseTime Research, (July 2018 ~ present)

Senior Researcher (L7),	2018 ~ 2020
Sensor Research Manager (L8),	2020 ~ 2022
Vice Research Director (L9),	2022 ~ Now

PROJECTS

TetrasSR

SenseTime Research

- Market-leading camera default mode snapshot feature (*a.k.a.* the snapshot feature on the first screen if one opens the camera of a mobile phone). Shipped to 100+ phones made by Xiaomi, VIVO, Honor and Transsion, including their flagship models (e.g. Mi 11 Ultra, Magic 3).
- Developed a robust and efficient burst frame stacking system, which is featured by:
 - 1) Fast and motion-robust frame alignment and pixel interpolation at sub-pixel grid;
 - 2) Realistic noise modeling and noise level estimation that accommodate the joint effect of sensor characteristics and commercial ISP;
 - 3) AI-based denoising module capable of effectively handling the spatially-varying noise with extremely lightweight architecture;
 - 4) Learning-based sharpening algorithm that adapts to sensor optical characteristics;
 - 5) Other necessary features: chroma denoising, face detail enhancement, tone enhancement, etc.
- Optimized with GPU and DSP, the system runs within 500ms on consumer phones to produce a 12MP snapshot. The algorithm is scored 139 points by DXO 2022 equipped with Sony IMX586 (1 point behind the winner, Huawei P50 Pro, which is powered by IMX800).

Hybrid RGB + Event-based Imaging

SenseTime Research

- Aimed at crafting the next-generation photography technology with hybrid RGB + event-based vision sensor, an advanced new type of sensor not yet available on the market. Collaborated with the sensor manufacturer, Sony Semiconductor Solutions, on this research.
- Proposed learning-based image deblurring method by realistically simulating the hybrid RGB+EVS behavior. Demonstrated practical IQ improvements in both good and bad lighting conditions.
- Proposed a novel efficient motion deblurring solution featured by uncertainty-aware RGB+EVS fusion and fast, learned iterative optimization. Achieved good image quality while maintaining extreme low cost that makes the algorithm practical to deploy on a companion chip.
- Still in the marketing phase, the proposed new techniques are under the co-working with SSS on making attractive demos and promoting around to OEM customers.

Academic Research

SenseTime Research & CVTEAM, Beihang

- Working on interesting academic research topics by myself, interns and graduated students that I supervise. Till far 20 papers published on top-tier journals and conferences, where I am the first or corresponding author for 12 of them, with 50% as oral papers. I've won Best Paper Awards of CGI at 2018 and IEEE BigMM at 2015 jointly with my co-authors. Recent topics include:
- Event-based vision and low-level vision, on which I study related topics at Sensetime with special interest on solving them through principled learning and optimization methods.
- High-level vision problems co-worked with CVTEAM, with particular interest in weakly supervised learning and semantic object segmentation.
- My Ph.D. research is mostly about object segmentation in images and videos, which were solved by weakly supervised and optimization-based methods.

SERVICES AND
REWARDS

Academic services and awards

- Technical PC or Reviewer: TPAMI, TIP, TMM, CVPR, ICCV, ECCV, ACCV, ISMAR
- Best Paper Award: Computational Graphics International 2018
- Best Paper Award: IEEE International Conference on Multimedia Big Data 2015

Awards at SenseTime

- The Dean Innovation Award, 2022
- Excellent Employee of the Year, 2022
- Excellent Team of the Year, 2022
- Star Employee of the Year, 2020
- Excellent Employee of the Year, 2019

Awards before graduate

- The Outstanding Doctorial Dissertation Awards, Beihang University, 2019
- The Academic Excellence Foundation of BUAA for PhD Students, Beihang University, 2017
- The National Graduate Scholarship, 2015
- The Graduate Innovation Award, School of Computer Science, Beihang University, 2014
- The Changzhao Qian & Xingyuan Shen Scholarship (1st Prize), Beihang University, 2011
- The Excellent Student Award, Beihang University, 2010 - 2011
- The Undergraduate Mathematical Contest (1st Prize, Rank 1st), Beihang University, 2009
- The National Undergraduate Mathematical Contest (Second Prize in Beijing Region), 2009
